<i>Chapter 1. Morphology and Systematics</i>	1
1.1 Morphology of Aphids, by M. Miyazaki	1
Introduction	1
Body	3
General structure	3
Spiracles	4
Setae and chaetotaxy	4
Waxy exudates and wax gland plates	5
Tubercles and projections	7
Head	8
General structure	8
Eyes, triommatidia and ocelli	10
Antennae	10
Clypeus	12
Mouthparts	13
Thorax	14
General structure	14
Legs	14
Wings	17
Abdomen	18
General structure	18
Sclerites	19
Genital and anal plates	20
Siphunculi	20
Cauda	22
External genital organs	23
Acknowledgements	23
References	23
1.2 Forms and Morphs of Aphids, by M. Miyazaki	27
Introduction	27
Morphs appearing in the life cycles of aphids	27
Fundatrix	29
Apterous and alate viviparous females	30
Gynopara, andropara and sexupara	32
Sexuales (male and sexual female)	33
Hibernating forms	34
Aestivating forms	37
Colour forms	39
Intramorphic colour variation	39
Intermorphic colour variation	40
Interclonal colour variation	41
Soldiers	43
Intergall migrants	45
Acknowledgements	46
References	47
1.3 Systematics, by F.A. Ilharco and A. van Harten	51
The most important classifications	51
Morphological characters used for determination	56
Sclerotization	58
Cuticular surface	58
Wax production	58
Hairs or setae	59
Colour of live aphids	61

Body length and shape	62
Head	63
Antennae	63
Mouthparts	63
Tubercles	64
Thorax	64
Legs	65
Wings	65
Tubercles	65
Abdomen	66
Siphunculi	66
Cauda	66
Anal plate	66
Genital plate	68
Gonapophyses	68
Spiracles	68
Tubercles	68
Other characters useful for determination	69
Biological characters	70
Biochemical characters	70
Cytological characters	73
Histological characters	73
Parasitological characters	74
Synonyms	75
Acknowledgements	76
References	76
<i>Chapter 2. Anatomy and Physiology</i>	79
2.1 Alimentary Tract, by M.B. Ponsen	79
Introduction	79
Stylets	79
Pharynx	82
Foregut	82
Midgut	89
Hindgut	90
Filtersystem	92
Mesodermal derivatives	94
Acknowledgements	94
References	94
Abbreviations used in Figures	97
2.2 Nutritional Physiology, by P.N. Srivastava	99
Introduction	99
Mechanism of food ingestion	99
Stylectomy and sap collection	100
Biochemical constituents of the ingesta	101
Nitrogen compounds	101
Carbohydrates	103
Lipids, vitamins and other compounds	103
Inorganic constituents	104
Digestive enzymes	105
Polysaccharidases	105
Invertase	106
Protease	107
Saliva	108
Nutritional requirements	109
Amino acids	109
Carbohydrates	110
Salt and trace metals	111
Vitamins	112
Lipid requirements and role of symbionts	112
Other factors affecting nutrition	113
Nutritional quality of primary and secondary hosts	113
Role of nutrition in reproduction and wing formation	114
Conclusion	114
Acknowledgements	115
References	115

2.3 Symbionts, by E.J. Houk	123
Introduction	123
Structure of mycetocytes and symbionts	123
Functions of symbionts	125
Future of symbiosis research	127
References	128
2.4 Nervous System, by J. Hardie	131
Introduction	131
Morphology	131
The brain	131
The suboesophageal ganglion	133
The thoracic ganglionic mass and ventral nerve cord	133
The stomatogastric system	135
Physiological considerations	136
Acknowledgements	137
References	137
2.5 Neurosecretory and Endocrine Systems, by J. Hardie	139
Introduction	139
Neurosecretory system	139
Distribution of neurosecretory cell bodies	140
Distribution of neurosecretory material	142
Ultrastructural studies	142
Functions of neurosecretory cells	144
Corpora cardiaca	145
Endocrine system	147
Corpus allatum	147
Prothoracic glands	150
Acknowledgements	150
References	150
2.6 Sensory System, by M. Anderson and A.K. Bromley	153
Introduction	153
Eyes and ocelli	153
Body, legs and wings	154
Mouthparts	155
Antennae	155
Scape and pedicel	157
Flagellum	157
Electrophysiology	158
Electroantennograms	158
Single sensillum recordings	159
Conclusion	161
References	161
Chapter 3. Reproduction, Cytogenetics and Development	163
By R.L. Blackman	
Introduction	163
Female reproductive system	163
Formation of the germarium	163
Vivipara	164
Ovipara	164
Trophocytes	165
Follicle cells and ovariole sheath in viviparous aphids	166
Ambiphasic females	167
Number of ovarioles	167
Male reproductive system	167
Chromosomes	168
Holoecentric character of aphid chromosomes	168
Chromosome numbers and karyotype evolution	169
Karyotype variation within a species	170
Polyploidy	171
Sex determination	171

Oogenesis and spermatogenesis	173
General observations	173
Oogenesis of the sexual egg	174
Oogenesis of the parthenogenetic egg	176
Spermatogenesis	180
Development of the fertilised egg	182
Eggs and oviposition	182
Maturation and early development	184
Diapause	185
Post-diapause development and hatching	185
Development of the parthenogenetic embryo	186
Cleavage and gastrulation	186
Blastokinesis	187
Post-embryonic development	188
Number of instars	188
Paedogenesis	188
Instar recognition	188
Instar duration and development times	189
Larval adaptations	189
Conclusion	190
Acknowledgements	191
References	191
 <i>Chapter 4 Biology</i>	197
 4.1 The Way of Life of Aphids: Host Specificity, Speciation and Distribution, by A.F.G. Dixon	197
Introduction	197
Host specificity	197
Polyphagy	200
Speciation	200
Worldwide distribution and number of species of aphids	203
Conclusions	205
Acknowledgements	206
References	206
 4.2 Host Plant Finding and Acceptance, by F.A. Klingauf	209
Developmental stage, "mood" and host selection	209
The host selection process of a migratory winged aphid — the classification scheme	210
The early phase of host selection after alighting	212
Piercing the phloem	212
Attractants and repellents: vision	214
Attractants and deterrents: olfaction	216
Arrestants and deterrents	216
Penetration stimuli	217
Phagostimulants	218
Conclusions	219
Acknowledgements	220
References	220
 4.3 Feeding, Adaptation and Excretion, by F.A. Klingauf	225
Structure of the mouthparts	225
Stylet operation	227
Adaptation to liquid plant food	230
Conditioning, clone formation, and feeding behaviour of parasitized aphids	231
Feeding sites	233
Feeding	235
Salivation	236
Feeding rate	237
Physiological status of host plant and aphid performance	238
Nitrogen content of the host plant	238
Age of the host plant	240
Abiotic treatments of the host plant	240
Biotic treatments of the host plant — aphids as elicitors of suitable food sources	240

Nutritional requirements	241
Nitrogen	241
Carbohydrates	242
Vitamins and minerals	242
Enzyme equipment	243
Honeydew excretion	244
What is honeydew?	244
Excretion rate	244
Excretion behaviour	245
Honeydew composition	246
Nutritional budgets	247
Acknowledgements	248
References	248
4.4 Polymorphism and Morph Determination, by K. Kawada	
Introduction	255
Forms, morphs and terminology	255
Production of wings	256
Temperature	256
Photoperiod	257
Crowding	257
Nutrition	258
Ants	259
Forms and morphs of parents	260
Wing control mechanism	260
Production of sexual forms	261
Photoperiod	261
Temperature	262
Intrinsic factors	263
Nutrition	264
Larval polymorphism	265
Prospects	266
References	266
4.5 Parthenogenetic Reproduction and the Rate of Increase in Aphids, by A.F.G. Dixon	
Introduction	269
Structure of the gonads	269
Intrinsic rate of increase	270
Developmental rate	271
Reproductive rate	275
Survival	279
Intra- and interspecific trends in the intrinsic rate of increase	282
Acknowledgements	285
References	285
4.6 Evolution and Adaptive Significance of Cyclical Parthenogenesis in Aphids, by A.F.G. Dixon	
Introduction	289
Evolution	289
Adaptive significance of asexual and sexual reproduction	290
Timing of sex	293
Conclusion	294
Acknowledgements	295
References	296
<i>Chapter 5 Aphids and their Environment</i>	299
5.1 Dispersion and Migration, by Y. Robert	
Introduction	299
Crowding effects	301
Flight behaviour	303
Teneral period and take-off	304
Flight	306
Alighting — settlement	308
Conclusion	309

Acknowledgements	310
References	310
5.2 Seasonal Development in Aphids, by A.F.G. Dixon.	315
Introduction	315
Seasonal changes in habitat quality	315
Synchronization with plant development	318
Conclusions	319
Acknowledgements	319
References	320
5.3 Feeding Process of Aphidoidea in Relation to Effects on their Food Plants, by P.W. Miles	321
Introduction	321
Methods of investigation	321
Outline of the feeding process	322
Phloem-feeding and parenchyma-feeding	323
Stylet penetration	324
Formation of stylet sheath	325
Functions of stylet sheath	327
Secretion and composition of the watery saliva	331
Functions of the watery saliva directly related to feeding	333
The saliva as a mediator of plant responses	334
References	335
5.4 Galling Aphids, by J.M.S. Forrest	341
Inductive agents	341
Surface galls	341
How galls are formed	342
Concentration effect	343
Introductory agents	344
Surface galls	344
Cecidogenesis	345
Internal feeding site	346
Pouch galls	346
Pineapple galls	348
Inducing factors	348
How aphids find their feeding sites	349
The role of galls in aphid biology	349
Conclusions	351
References	352
5.5 Ant-Aphid Mutualism, by J.H. Sudd	355
Introduction	355
Benefits of mutualism to aphids	357
Exploitation of honeydew by ants	359
Competition for the services of mutualists	361
Do ants prey on the aphids they tend?	362
References	364
Chapter 6 Evolution	367
6.1 Palaeontology and Phylogeny, by O.E. Heie	367
Introduction	367
Methods used in studies of fossil aphids	367
How to recognize a fossil insect as an aphid	368
Aphid faunas of the past	369
The Triassic	369
The Jurassic	370
The Cretaceous	372
Aphidoidea	373
Phylloxeroidea	374
Canadaphidoidea	375
Aphidomorpha incertae sedis	375
The Tertiary	375

Evolutionary patterns	381
Plesiomorphous and apomorphous characters	382
Phylogenetic considerations	384
References	389
6.2 Morphological Structures and Adaptations, by O.E. Heie	393
General adaptations	393
Special adaptations	394
Adaptations for particular hosts	394
Adaptations for life in galls	395
Adaptations for myrmecophily	396
Adaptations for abiotic environmental factors	396
Defensive adaptations against enemies	397
References	400
6.3 Evolutionary Estimation of Taxa, by G.Ch. Shaposhnikov	401
Introduction	401
Classification and estimation of characters	401
Estimation of taxa and their arrangement in the system	405
References	408
6.4. Evolution of Aphids in Relation to Evolution of Plants, by G.Ch. Shaposhnikov	409
Adaptation of aphids to their host plants	409
Change of host plants and origin of heteroecy	410
The main direction of the change of host plants in aphids	411
Change of ecosystems and change of aphid faunas in the past	411
References	413
<i>Chapter 7 Organization (Structure) of Population and Species, and Speciation</i>	<i>415</i>
<i>By G.Ch. Shaposhnikov</i>	
Introduction	415
Temporal structure of amphimictic populations and the origin of clonal populations	415
Genetic-ecological structure of populations	417
The spatial structure of populations	419
Population homeostasis	419
Permanent and temporary populations	420
Summary and conclusions on population organization	420
The structure of a species	421
The main features of a species	422
Modes of speciation	424
Experimental mode of speciation	424
Conclusions and some suggestions for the future	427
References	428
