

Contents

Contents of Volume A

- Chapter 1. Morphology and Systematics*
Chapter 2. Anatomy and Physiology
Chapter 3. Reproduction, Cytogenetics and Development
Chapter 4. Biology
Chapter 5. Aphids and their Environment
Chapter 6. Evolution
Chapter 7. Organization (Structure) of Population and Species, and Speciation

Contents of Volume B

<i>Chapter 8. Techniques</i>	1
8.1 Sampling Techniques, by Y. Robert, C.A. Dedryver and J. S. Pierre	1
Introduction	1
Sampling alatae	1
Devices and principles	2
Case studies	3
Sampling populations on plants	9
Underlying ecological processes and their consequences upon sampling distributions	10
Relationships between mean and variance	11
Sampling strategies	11
Sampling techniques	15
Acknowledgement	17
References	17
8.2 Population Development Models, by S.A. Ward, R. Rabbinge and A.F.G. Dixon	21
Introduction	21
Descriptive models	22
Analytical explanatory models	23
Numerical simulation models	24
Summary models and their use in technology	27
Discussion and conclusions	28
References	29
8.3 Mounting Techniques, Aphid Collections, by O. Heikinheimo	31
Note-book for recording data of aphid samples	31
Clearing procedures for mounting aphids on slides	31
Treatments	31
Alternative procedures for clearing	34
Fast clearing procedures	35
Mounting of the aphids on microscopic slides	35
Mounting media	35
Mounting procedures, for example with PVA	37
Slide labels	39
Aphid collections	40
Photographs and collections of films and pictures	43
References	43
8.4 Microscopy	
8.4.1 Light Microscopy, by M.B. Ponsen	45
Dissections	45
Histological techniques, drawings	45
References	46

8.4.2 Transmission Electron Microscopy (TEM), by F.M. Kimmings	47
Introduction	47
Preparative techniques	47
Uses of transmission electron microscopy	51
References	53
8.4.3 Scanning Electron Microscopy (SEM), by F.M. Kimmings	55
Introduction	55
Use of SEM	56
References	58
8.5 Rearing and Handling Aphids, by R.L. Blackman	59
Introduction	59
Host plants	59
Caging	60
Excised leaves and leaf discs	61
Root aphids	62
Rearing procedure	63
Handling aphids	64
How to obtain different forms and morphs	64
Apterous and alate viviparae	64
Sexual morph production in Aphidinae	65
Sexual morph production in other aphids	67
Breeding aphids	67
References	68
8.6 Virus Transmission Studies, by E.S. Sylvester	69
Introduction	69
Initial collection	69
Colony maintenance	70
Transfer techniques	71
Caging	72
Specialized procedures	73
Timed feedings	73
Pre-penetration time	73
Probing or penetration time	74
Feeding	74
Excretion	75
Special techniques	75
Stylet manipulation	75
Membrane feeding	75
Injection	76
Protocols and analysis	77
Concluding remarks	79
References	80
8.7 Use of Isotopes, by J.Ph.W. Noordink and P. Harrewijn	83
Introduction	83
Techniques to detect radioactivity	84
Stable isotopes and activatable elements	85
Micro-autoradiography	86
Examples of the use of radioisotope techniques in various fields of aphid research	86
Feeding and nutrition	86
Probing	87
Effects of aphids on their hosts	87
Dispersion and migration	87
Use of isotopes in physiological and biochemical processes	88
Insecticides	89
Biological control	90
Aphids as tools in other areas of research	91
References	92
8.8 Electrical Recording of Stylet Penetration Activities, by W.F. Tjallingii	95
Introduction	95
Electrical origin of the EPG, and specifications for a set-up	96
EPG patterns and behavioural relations	99
Description of EPG patterns	100

EPG in combination with other techniques	102
Light and electron microscopy	102
Stylet amputation	102
Radioactive tracers	103
Electromyography	104
Computer analysis of signals	104
Methodology	104
Conclusion	106
References	107
8.9 Aphid Energy Budgets, by M. Llewellyn.	109
The value of energy budgets in aphid biology	109
The aphid energy budget and the efficiency of energy utilization	110
Aphid energy budgets	111
Consumption (<i>C</i>)	111
Production (<i>P</i>)	111
Respiration (<i>R</i>)	113
Nitrogenous excretion and faeces (<i>F + U</i>)	114
Energy budgets for individuals and populations	115
Interpretation of aphid energy budgets	115
References	117
8.10 Aphid Bioassay Techniques, by A.L. Devonshire and A.D. Rice.	119
Introduction	119
Bioassay techniques	120
Direct application	120
Indirect application	122
Combined direct and indirect application	123
Factors affecting bioassay performance	124
Aphids	124
Chemicals	124
End-point	125
Statistical analysis	126
References	126
8.11 Electrophysiological Techniques, by M. Anderson and A.K. Bromley.	129
Introduction	129
The electroantennogram (EAG)	129
Single-sensillum recordings	131
Other recording methods	132
References	132
8.12 Electrophoretic Techniques for the Genetic Study of Aphids, by W.W.M. Steiner.	135
Introduction	135
Equipment and sample preparation	135
Gel and electrode buffers	138
Gel preparation	138
Gel staining	140
Using acrylamide techniques	140
Using recombinant DNA techniques	140
Potential application of techniques	141
Acknowledgement	141
References	141
8.13 Applications of Artificial Feeding Techniques for Aphids, by T.E. Mittler.	145
Introduction	145
Probing	146
Salvations	147
Uptake measurements	149
Pressure and uptake	149
Phagostimulants, deterrents and toxicants	150
Nutrition	153
Food utilization and honeydew	155
Osmoregulation	156
Meridic and natural diets	156

Renewal of diets	157
Parasitoids and predators	158
Virus transmission studies	158
Polymorphism	158
Conclusions	161
Acknowledgements	161
References	162
 <i>Chapter 9. Natural Enemies</i>	 171
 9.1 Parasites	
 9.1.1 Aphidiidae, by P. Starý	 171
General characteristics	171
Biology	171
Distribution	173
Dispersal	174
Seasonal history and life cycles	175
Host range	176
Parasitoid spectrum	176
Intraspecific taxa	177
Parasitogenic effects	177
Reproduction	178
Food budget	178
Honeydew	178
Rate of development	178
Fluid droplets	178
Coloration	179
Shape and size	179
Dispersal	179
Interspecific relations	179
Aphidiidae	179
Aphelinidae	179
Hyperparasitoids	180
Predators	180
Fungi	180
Aphid-attending ants	180
The effect of parasitoids on aphid populations	180
References	182
 9.1.2 Aphelinidae, by P. Starý	 185
Introduction	185
Biology	185
References	187
 9.1.3 Hyperparasites, by D.J. Sullivan, S.J.	 189
Introduction	189
Hyperparasitism in general	189
Types of aphid hyperparasitism	189
Ecological impact	190
Taxonomy	190
Behaviour	191
Endoparasitic hyperparasites	191
Ectoparasitic hyperparasites	193
Genus <i>Aphidencyrtus</i>	194
Tertiary parasitism	194
Host specificity	194
Cabbage aphid complex	195
Two aphids on alfalfa	196
Three apple-infesting aphids	196
Potato aphid complex	196
Walnut aphid complex	197
Ecology	198
Always harmful?	198
Beneficial?	198
Mathematical models	199

Field studies	199
Biological control	200
Summary	200
References	201
9.1.4 Sampling and Rearing of Aphid Parasites, by M. Mackauer and S. Kambhampati	205
Introduction	205
Sampling	205
Collecting equipment	206
Collecting methods	206
Collection of aphid mummies	206
Collection of aphids	207
Collection of adult parasites	208
Rearing	209
Natural hosts	209
Facultative hosts and diets	211
Mass production	212
Conclusions	213
References	213
9.2 Predators, by B.D. Frazer	217
Introduction	217
Number of predatory species	217
Significance of predation	218
Voracity and the functional response	220
Searching behaviour	222
The numerical response	222
Temperature	224
Generalist predators	225
Switching, preference and capture efficiency	226
Summary	227
Acknowledgements	228
References	228
9.2.1 Coccinellidae, by B.D. Frazer	231
Introduction	231
Systematics	231
Biology	232
Ecology	232
Natural enemies	232
Effectiveness	233
Searching behaviour	235
Capture of aphids	236
The functional response	237
Other consequences of searching and capture	237
Numerical responses	238
Aggregative numerical response	238
Reproductive numerical response	239
Sampling for coccinellids	240
Cannibalism	241
Effectiveness and models	241
Limitations and enhancement of coccinellid effectiveness	242
Summary	244
Acknowledgements	244
References	245
9.2.2 Neuroptera, by T.R. New	249
Introduction	249
Hemerobiidae (brown lacewings)	251
Chrysopidae (green lacewings)	254
Greenhouse interactions	255
Field interactions	255
Conclusions	256
References	256

9.2.3 Syrphidae, by R.J. Chambers	259
Description	259
Adults	260
Feeding and flight activity	260
Oviposition	261
Larvae	262
Feeding, growth and development	262
Parasitism	263
Effectiveness	264
Pesticides and integrated control	266
Acknowledgements	267
References	267
9.2.4 Cecidomyiidae, by W. Nijveldt	271
Introduction	271
Morphology	272
Biology	272
The use of gall midges in biological control of aphids	274
References	276
9.2.5 Anthocoridae, by C. Hodgson and C. Aveling	279
Classification	279
Importance of anthocorids in the biological control of pests	280
Life cycle	280
Food preferences	285
Predatory efficiency	286
Effect of pesticides on anthocorids	288
Conclusions	289
References	289
9.2.6 Carabidae and Other Invertebrates, by K.D. Sunderland	293
Introduction	293
Acari (mites)	293
Araneae (spiders)	296
Chilopoda (centipedes) and Opiliones (harvestmen)	297
Coleoptera	297
Dermaptera (earwigs)	299
Diptera	300
Formicidae (ants)	300
Heteroptera (bugs)	301
Hymenoptera (wasps)	302
Lepidoptera	302
Mollusca	302
Others	302
Pest aphids predated outside crops	302
Conclusion	303
Acknowledgements	304
References	304
9.2.7 Sampling, Rearing and Handling of Aphid Predators, by I. Hodek and A. Honěk	311
Introduction	311
Sampling	311
Selecting the population of origin	311
Places convenient for mass sampling	313
Transport of collected material	314
Rearing and handling	314
Food specificity/artificial diets	315
Rearing on dried and frozen aphids	316
Polyphagous predators	317
Intraspecific predation	317
"Obligatory" diapause	318
Genetic deterioration/improvement	318
References	318
9.3 Aphid Pathogens, by J.P. Latgé and B. Papierok	323
Introduction	323

Identification and cultivation of the fungal pathogens of aphids	323
Pathogenesis of fungal diseases in aphids	325
Ecology and specificity of the fungi	327
Pathogenic variability	330
Conclusion and suggestions for future work	332
References	333
9.4 Resistance of Aphid Natural Enemies to Insecticides, by D.J. Horn and R.W. Wadleigh	
Introduction	337
Resistance in aphidophagous insects	337
Genetic and physiological factors favouring resistance	338
Potential for resistance	340
Selective toxicity favouring predators and parasitoids	341
Coccinellidae	341
Chrysopidae	341
Diptera	342
Hemiptera	342
Hymenoptera	342
Influencing factors	342
Indirect, sublethal effects	343
Summary and prospects	344
Acknowledgements	345
References	345
General Index	349
Index to the Aphids	359
Index to the Aphid Parasites/Pathogens	361
Index to the Aphid Predators	363

Contents of Volume C*Chapter 10. Damage**Chapter 11. Control*
