HOST PLANT LIST OF THE WHITEFLIES (ALEYRODIDAE) OF THE WORLD

GREGORY A. EVANS

USDA/Animal Plant Health Inspection Service (APHIS)

The following host plant list was extracted from the Whitefly Taxonomic and Ecological database and edited to make it more readable. I listed the host plants alphabetically by genus with the plant family in brackets after the name. I listed the whiteflies that have been recorded from the plant host under each species with the country where the collection was made in brackets. The records include published records of whiteflies and their hosts from articles on whiteflies, what has been recorded in the parasitoid literature, unpublished records of specimens identified by Avas Hamon in the FSCA (Florida State Collection of Arthropods, Gainesville, FL, USA) collection and unpublished records of whiteflies intercepted at U.S. Ports of Entry. I decided to include the latter records because they indicate the likely host plant and country of origin of the species, although the actual presence of these species on these hosts in these countries should be confirmed by collections made on these host plants within the country. I thank Peter Touhey (USDA/APHIS) for extracting these records for me from the USDA/APHIS database. Most of the records from the U.S. ports of entry come from specimens identified by John W. Dooley (USDA/APHIS) or Steve Nakahara (USDA/ARS/SEL). Note that many of the host plant records for *Bemisia tabaci* and *Trialeurodes vaporariorum* are not included. These two species are highly polyphagous, it would not be surprising to find these species on almost any terrestrial plant.
